DETAILED ACTION

Receipt is acknowledged of the amendment, filed on 11/13/2003, which has been entered in the file. Claims 1-28 are pending.

Allowable Subject Matter

1. Claims 1-28 have been allowed over the prior art of record.

The following is an examiner's statement of reasons for allowance: The prior art of record, taken alone or in combination, fails to teach or fairly suggest: a smart-card reader comprising a locking slide and a locking lever mechanism wherein the locking slide extends longitudinally and outside a perimeter of the smart-card and of the housing and alongside one of said side surfaces and wherein the locking lever mechanism locks the locking slide in a locked reading position and is located, seen in the direction of the smart-card insertion in front of the contacting apparatus and above the smart-card, in combination with the other claimed limitations as set forth in the claims.

While the prior art of record, for example: Bleier (US 6,382,508 B1), Kanayama et al (US 6,367,700 B1), Canard et al (US 6,341,727), Zuin (US 2001/0008815 A1), Zolkos et al (US 6,138,916), Shima et al (US 5,331,144), Reichardt et al (US 4,814,593), Bleier (JP 11-242722 A), all teach card readers having mechanisms for locking cards in a card reading position, the prior art of record fails to teach or fairly suggest applicant's claimed structure of the locking slide and locking lever, as recited in the claims. Furthermore, without the benefit of applicant's teachings, there is no

motivation for one of ordinary skill in the art at the time of the invention to modify the prior art in a manner so as to create the claimed invention.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Sato (US 6,655,972 B2), Sato (US 6,652,299 B2), and Nabetani et al (US 6,643,125 B2) all teach card readers having mechanisms for locking cards in a card reading position.
